UTILIZATION MANAGEMENT SYSTEM (UMS) OUTCOME & **DATA ANALYSIS**

The WorkStrategies Functional Capacity **Evaluation (FCE)** provides an objective and comprehensive evaluation of an individual's ability to perform essential work functions.

The FCE is an important tool used to assist employers, physicians, insurance companies, attorneys, case managers and vocational consultants. It helps determine safe, functional levels for an individual to either return to work or establish functional ability.

The evaluation assists referral sources by offering information for adjudication of claims in short/long-term disability, providing returnto-work capabilities and determining ability levels for liability cases using appropriate medical standards.

THE WORKSTRATEGIES FCE FEATURES:

- » Standardized functional testing protocols: All FCEs follow the established national FCE standard protocols and testing methods, utilizing standard evaluation tools which are widely accepted in the field and in scientific literature.
- **» Peer-reviewed research:** Our FCE is based on peer-reviewed published literature and includes physiological, biomechanical and psychophysiological approaches.

- » National network: Select Medical has a national network of clinicians who can administer FCEs. Experienced evaluators are certified through standardized training approved by our Clinical Education Program.
- » Validity: Our FCE is designed to assess consistency and exertion during functional and work-related tasks.

CRITICAL ASSESSMENT COMPONENTS OF THE WORKSTRATEGIES FCE INCLUDE:

- 1. Clinical function: Includes diagnosticspecific deficits such as range of motion, strength, neurological dysfunction and stability/mobility.
- 2. Functional ability: Includes lifting, carrying, pushing and pulling, as well as positional tolerances such as walking, sitting, standing, bending, reaching and hand function with physiologic monitoring, cross testing and performance analysis.
- **3. Work tolerances:** These are the factors that identify the individual's tolerance to perform functional tasks and jobspecific activities as dictated by the referral question.

The WorkStrategies FCE is safe, reliable and defensible.
